##
What
is
reproducibility?
```

In
sci-
ence
it's
by
some
con-
sid-
ered
to be
the
holy
grail
of
statis-
tics.
Basi-
cally
it
means
do-
ing
an
ex-
peri-
ment
or
re-
search
mul-
tiple
times
by
dif-
fer-
ent
peo-
ple
or
groups,
with
the
same
num-
bers
and
get
the
same
result.

Challenges

One of the big challenges of (statistical?/Data?) science has been to reproduce the identical results from an earlier re-search. In a significant amount of re-search it has proved hard or flat out impossible to reproduce the results from other peoples and older re-search

Com-
putable
Documents

In
more
mod-
ern
times
a
new
idea
around
this
have
been
brought
up:
com-
putable
doc-
u-
ments.
The
idea
be-
hind
this
is
when
pub-
lish-
ing a
re-
search
pa-
per,
one
sub-
mits
the
data,
equa-
tions
and
cal-
cula-
tions
to-
gether
with
a
doc-
u-
ment
that's
com-
putable.
That
way
when
other
re-
searchers

Short
liter-
ature
review

According
to
Mc-
Nutt
(2014)
ad-
vanc-
ing
in
sci-
ence
is re-
liant
on
dis-
cov-
eries
that
can
be
trusted,
but
stated
that
stud-
ies
that
have
been
per-
formed,
can't
be
re-
pro-
duced.
In
tan-
dum
with
this,
Peng
(2011)
has
brought
up
the
idea
that
re-
pro-
ducibil-
ity
should
be a
re-
quire-
ment
for
pub

Already
in
the
early
1930's
the
ac-
cess-
abil-
ity
to
the
data
for a
re-
search
was
aired
by
Frisch
He
stated
that
in
sta-
tisti-
cal
re-
search,
the
raw
data
should
be
pub-
lished
(1933).
Later
in
the
1960's
it
was
deemed
nearly
im-
pos-
sible
to
re-
pro-
duce
re-
search
on
econ-
omy
with
big
mod

Kva starta “computable documents” med og kortid? Ka e gjort i forkant ang. R Notebook-programmer og reproduserbarhet? Ka seie forfattar X om Y? Ka seie Forfattar Z om Y? Litt “bakgrunn” for detta med “computable documents”.

→ ca. 1 sida +/-

Discussion

Why is reproducibility important? What are the issues surrounding it? What steps have been taken to improve the situation? What does scientist say about it?

Conclusion

Help? Yes, to a degree. Solve/Fix the problem? No, atleast not yet. Too many issues. Different systems, different OS, different software and packages. Theories and calculations can change over time. Packages being updated/outdated. R have “Session Info” to list systems, maybe a library of packages would help? It’s seems to be a step in the right direction, but it still remains issues around reproducibility even with the help of computable documents like R Notebook.
